FRIDAY...... DECEMBER 10

Tea and Coffee. Seeing that our Tea and Coffee are bu modern "inventions," one wonders how our venerable, long-lived ancestors managed to get along through several hunared years without ten and coffee. Moreover, they had neither whisky nor editors that amounts to almost a panic. tobacco. It is true that Noah, who was quite celebrated in his day as a coldwater man, planted a vine and made himself tipsy on the juice of the grape; an act which did not meet with public approval among the Crusaders of that date. But, of the virtues of tea and

command of the Ark knew nothing. In recent days we have had hygienic schools of high sounding names whose tea and coffee with a counterblast as weed more fashionable and more popular, so when these crusading counterin vogue those beverages were most in ing a sociable dinner.

It matters not now how nor why these vegetable products, the leaf of one plant and the berry of another, ever came to be the constituents for flavoring the beverages of two-thirds of the human race. The fact of itself is so strange as to indicate beyond all peradventure that there is something in the needs of the pabulum that which these beverand so universal among mankind, can not depend upon a mere whim of fancy or the caprice of fashion. If it had so depended, their use would long since bave been discarded by reason of the changes of fashion and the fickleness of fancies. Certainly, men can live without them, and very comfortably no doubt; so they can without potatoes. But all that is nothing to the purpose. The tea and coffee of the people have come to be ranked among the common necessities of all sorts and conditions of men; and for that reason these articles have lately been placed on the free list of imports from abroad by the tariff law of this country.

In the Physiological Memoirs of Dr. Wm. A. Hammond, Surgeon General of the U. S. Army, some very interesting personal experiments are detailed and the conclusions deduced therefrom that go far towards setting this matter upon such a scientific basis that mere clamor can not prevail against it. Dr. Hammond practiced these experiments on himself in a manner the most exact. weighing carefully the food taken and the excrement voided each day for ten days in each case of experiment. He records of these that he found conclusively that tea and coffee are excitants of the brain and nervous system, and at the same time considerably retarded the metamorphosis of the tissues, i. e. the decay and waste of the bodily elements; -and that, of the two, tea possesses a more powerful influence in restraining the destruction of the tissues, or substances of the body, than coffee; while the latter is the greater

Romantic.

Caledonia, Livingston county, N. Y., has had a genuine romance. In substance it is that a man, whose name is not given, left that town about elever poster fear in exhausting diseases and whenever it becomes needful to supply the natural waste of the body in lack of sufficient food; while for the student, the literary man, the man of complex business.—In all, indeed, in whom it is important to sustain a certain degree of either cerebral activity or physical energy, coffee is to be preferred.

It is a determined fact that the brain follows the same general law which governs ether organic structures of the body—i. e., that increased use promotes increased decay of its substance, and that the products of this decay are, as with other organs, removed from the system by elimination to make way for newer deposits of brain material. Intense mental labor, by hastening the more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain, necessarily demands a more rapid renewal of that tissue, of the brain had not to the products of the products of the more rapid renewal of that tissue. To had never seen she was not suited he had never seen, she was not suited he was to send her home again. She start-the use of tea and coffee, as articles of "accessory food," as Dr. Chalmers calls them becomes exceedingly useful by them, becomes exceedingly useful, by diminishing the waste of the substance of the brain, at the same time that they give increased activity to the action of the brain itself. In this combined action poffee is superior to tea.

After summing up all the tests of his experiments in this regard, Dr. Hammond remarks-"That ten and coffee are beneficial to mankind when used in moderation, must be apparent to all who are acquainted with the recent investigations on the subject. Aside from their physical effects, the feeling of contentment they engender within us, and the disposition to reflection they encourage, are not to be disregarded in the sum total of their good works."

That witty philosopher, Sidney Smith whose intellect was equally brilliant and profound, made this devout exclama-

"Thank God for tea! What would the world do without ten? I am glad I was not born before tea! \* \* If you want to improve your understanding, drink coffee. Sir James Mackintosh used to say he believed the difference between one man and another was produced by the quantity of coffee he drank."

When the experience of wise men and the experiments of science demonstrate what observation has long been teaching us, it should serve to check the railings of those who denounce the use of ea and coffee as only evil and that con-

Some of the Eastern papers are agonizing over the dangers that are besetting the Supreme Court of the United States. It seems that while the suit between the Pacific Railroad Co. and the Government was pending, and before the Court had announced their decision, as recently reported, the Judges all dined with the counsel for the Railroad. And this circumstance has excited a de gree of alarm in the minds of New York

We, out West, certainly not sympathize in that alarm. Whatever light consideration may be sufficient to weigh down the integrity of those panicky editors, we do not believe that the U.S. Supreme Court is to be bought up by a dinner. coffee, the unfortunate old Admiral in If a good dinner is sufficient grounds for those editors' alarm, we must inter that, with them, such things are very rare and very highly prized. But such a great specialty consisted in condemning matter as a dinner may not be so uncommon nor so precious among the stern and as stunning as that of King Judges of the Supreme Court as to over-James against tobacco. But, as the cometheir judicial integrity. We would royal manifesto only made the nicotlan advise those alarmists in New York to reconsider their strictures upon this topic, and not fancy the heavens disblasts sgainst ten and coffee were most solved because of such an event as tak-

THE telegraph rather startled the journed. country the other day by announcing that Mr. Beecher had said that "When Plymouth Church is assaulted, she will always throw out her fangs." We thought, on seeing this remarkable figure of speech, that it could hardly have proceeded from one so a master physical economy of the human of rhetoric as Mr. Beecher is, and consystem demanding for its proper cluded that if Plymouth Church or any other church had any "fangs," they had ages supply. Their use, so permanent better get some dentistry done without delay. But it now turns out that the sentence should have read. "throw out her flag,"-not fangs. Telegraph did it.

THE question is frequently propounded as to whither Tweed could fly for safety from a requisition from the United States. There are several places on the face of the earth yet, where he would be free from arrest, and which he would probably prefer to the penitentiary. For instance, we have no extradition treaties with Spain, nor with Belgium covering such offenses as his. So that even in Cuba the Boss might pass the winter very pleasantly; and if not suited with that climate, Brussels might be found wholesome and agreeable to the "great unjugged."

It is reported that Tweed said that he wouldn't mind the officials who guarded him; he could buy them off at once and forever. But it was his lawvers who were ruining him. They were never satisfied. One payment was but a prelude to two more. So he would be Republicans. compelled to run away in order to escape from his lawyers. And away he went.

Ir is said that "Woman stoops to con quer." We defy her to do it now-a-days without letting out a reef, or bursting her dry-goods.

M. D. CONWAY maintains that there never was a fat devil. Now what the devil does Conway think of Boss Tweed?

# Romantic.

Caledonia, Livingston county, N. Y., has had a genuine romance. In sub-stance it is that a man, whose name is

admits to being over forty.

A man whom Dr. Chalmers engaged to manage a disorderly Sunday-school kept his eyes wide open during prayer, and when one boy thrust a pin into an other he marched up the aisle, still pray ing, and cuffed that boy's ears, and went back again, praying all the time. After that he was master of the situation, for the boys thought that a man who could and pray like that could not be put down.

After "Uncle Danel Drew" had sut scribed \$20,000 toward founding a new Methodist College he remarked to a friend one day: "Well, sir, I didn't friend one day: "Well, sir, I didn't know where the money was coming from. I was worried over it, and so made it a subject of prayer. After fasting and praying over the matter for one day I went down on Wall street, and in less than twenty-four hours I skinned those fellows out of \$200,000."

Bob Johnson, of the Central Wiscon Bob Johnson, of the Central Wisconsin, says that a Wausau young lady entered a dry-goods store, the other day, and asked for a pair of stockings. The clerk politicly asked her what number also wore? "Why, two — you blasted fool, you! Do you suppose I am a centipede, or have a wooden leg?"

## FROM WASHINGTON.

ectal Correspondence of the Star. WASHINGTON, Dec. 6, 1875.

The organization of a new Congress is always an important, and sometimes an imposing event. In the case of the present Congress, the incidents of the organization are peculiarly interesting. For the first time in seventeen years a Demcame the duly qualified Speaker of the coratic Speaker of the House of Representatives; and he at sentatives was to be inducted into office.

There were likewise numbers of new oath to the members by groups. A good many of the Southern members being unmembers, some of them inexperienced and verdant; and the Washington "pop- same was sultably modified as to them ulace" are ever eager to scan the faces and physique of the "new members." The old members and habitues of the Capitol however renowned, are passed business. by almost unnoticed among the "fat and greasy citizens" here, while they will scrutinize the physiognomy and general make-up of new members as closely as though they had some personal interest it to carry in the man,—and possibly they have.

Precisely at noon to-day the proceedngs for organizing the National Legislature were commenced. In the Senate, nothing was done but to take suitable steps for the preservation of its dignity, and after a three minutes prayer and thirty minutes session that body had finished its first day's work, and ad-

The great interest of the occasion was centered in the Hall of the House. This was literally packed with people long before the hour of twelve. On such occasions the "sovereigns" are apt to make pretty free with public places; so that not only was every gallery and corridor crowded, but even the sacred seats of the members in the body of the Hall were unceremoniously appropriated to such an extent that many of the "elect" were forced to stand while the "proceedings proceeded." Nevertheless every-thing was done after the manner of the A postolic injunction, "with decency and in order."

in order."
Scarcely had the hour of twelve been knelled by passing bell, when the Clerk of the late House, McPherson, as his duty was, called the new House to order, and immediately proceeded to call the roll of the members-elect, in order to determine whether a constitutional quorum were present for the transac-tion of business. Out of the whole mempership of 292, only six were absent. A quorum present being announced by the retiring Clerk, for a moment a solemn stillness reigned throughout the Hall. The first voice to break that silence and to utter the initial words of the new House was that of Lamar of Missis-sippi, who moved for the election of the Speaker; and on this being agreed to, Mr. Lamar immediately added,—"I put in nomination for the office of Speaker of the House for the Forty-fourth Congress Mr. Michael C. Kerr, a member-electrom the State of Indiana."

This nomination, which had been pre-viously agreed upon in the Democratic caucus of Saturday, was followed by the nomination of James G. Blaine, of Maine, for the same position, on the part of the

Then followed the loud monotonous call for the roll of members by the Cierk for their votes. Finally the Clerk announces:—"The whole number of votes cast is 282, necessary to a choice 141; Michael C. Kerr received 173, James G. Blane 106;" and this was confirmed by the four tellers; whereupon Mr. Kerr

as announced as elected. During these proceedings it was a study to watch the countenances and manner of those who had figured con-spicuously in the contest for the Speakership. Mr. Kerr himself sat far back from the Speaker's desk, on the right-hand side of the Hall. He seemed, from his manner, about the most indifferent person in that crowd as to the pro-ceedings, probably because he knew the

Speaker's Chair he would have been a monkey in a pulpit.

But the vote has been declared and

But the vote has been declared and Mr. Kerr pronounced elected. Thereupon the Clerk appoints Mr. Blaine and Mr. Raadall to the graceful duty of escorting the newly elected Speaker to the Chair. And most gracefully is this duty performed. Mr. Blaine and Mr. Randall advance from their seats in the body of the Hall to the open space in front of the Chair, where they meet and kindiy and cordially greet each other by a mutual pressure of lands. Thence they proceed arm in arm up the main also to where the Speaker is seated. Addressing to him the few words of appropriate courtesy, the Speaker smiling accepts the offered arm of each, and marches thus escorted to the Speaker's Chair, when his escort, bowing him to his scat, retire.

his escort, bowing him to his seat, retire.

Then once more did utter stillness reign in that noisy hall, while the new Speaker stood for a moment, preparatory to his first utterance from that high place. His speech was brief, but sufficient; merely a graceful utterance of his thanks. This done the Clerk immediately said: "Mr. Kelley, of Pennsylvania, as the oldest member of the House in continuous service, will now administer the outh to the Speaker elect."

Mr. Kelley steps forward to the space below the Speaker's desk, and in a protoundly solemn manner and with most impressive voice of deep sonorous tones, that alone breaks the utter silence around him, administers the following oath:

"You Michael C. Kerr, de solemnly swear or

A "winter cane" has been invented in Paris for gentlemen only. It is a long, hollow tube, and, before the swell owner goes out on his promenade, it is filled with a chemical preparation which generates heat and keeps the hands warm for hours.

Speaking of a new club "with home comforts," an exchange asks, "why not have a home with club com.orts?"

him, administers the following oats:

"You. Michael C. Kerr, do solemnly swear or affirm that you have nearly given no and, contrenance, courset or encouragement to persons engaged in armed hostility thereo; that you have neither sought nor necepted, nor attempted to exercise the functions of any office whatever under any authority or pretended authority in hostility to the United States; that you have not yielded a voluntear support to any pretended government, author-

ity, nower or constitution within the United States hostile or inimical thereto. And you defurther swear or affirm that to the best of your knowledge and ability you will sapport and defend the Constitution of the United States against all eachies, forbigg and domestic; that you will sear true faith and allegance to the same; that you take this obligation freely, without any mental reservation or purpose of evasion, and that you will well and faithfully discharge the duties of the office on which you are about to enter, so help you God."

And thereupon Michael C. Kerr be-

And thereupon Michael C. Kerr be-The other officers were immediately elected, and the House of Representa tives of the Forty-fourth Congress was declared duly organized and ready for

Sulphurie Acid and Weeds.

A correspondent of the Journal of Horticulture (Eng.) writes: "Take an old blacking bottle, with a wire around the stick should not be pointed, but should be notched round, for an inch or two at the end, the better to hold the liquor. Just one drop in the heart of plaintain is sufficient to cause death, one dip enough to destroy three or four plants. If the acid is good, the work of death can both be seen and heard, for the vitrial hisses, and it burns up the plantain in a moment. A row of plantains a foot wide sprang up on a lawn here, where an iron fence formerly run. The owner, seeing at a place he visited the good effect of vitriel, put the hint in practice. The plantains were killed in nractice. The plantains were killed in an hour, and have never appeared again. It is three years since, and it is impos-sible to recognize the line of the fence; it completely burns the roots out. I have tried it on large daudelions with the sried it on large dandellons with the same result. One of the young men there amused himself by hunting out the longest thistles he could find to experiment on. The vitriol completely killed them by eating the roots out. One drop will do. Care is required that it does not touch the skin, boots or clothes; it is not sate in the hands of children, but a man convene with ten minutes? or woman, with ten minutes' practice, can kill plantains more quickly than any lad can eat gooseberries."

#### Ammonia and Flowers.

An article in the French Journal Horticulture presents the interesting results of experiments undertaken to test the effect of ammonia upon the coltest the effect of ammonla upon the col-ors of flowers. Prof. Gobba, the observ-er, poured a small quantity or aqua ammonia into a dish, over which he placed a funnel. Inserting into the tube of this the flowers to be operated upon, he found those tinted blue, violet, and purple, were changed to a beautiand purple, were changed to a beautiful green; those tinted with a deep carmine were changed to black; while flowers of a pure white were turned yellow

etc.
Thus fuschias, having white and red in the calvx and corolla, became, on exposure to the ammonia, yellow, blue and green. By immersing these flowers in water at the conclusion of the experiment, they retained their new colors for several hours, after which they gradu-ally resumed their original hues. Prof. Gobba discovered in the course of his experiments that asters, which naturally have no fragrance, acquired a delightful perfume under the influence of

ammonia. He also found that violet asters turned red when moistened with a diluted solu-tion of nitric acid, and that the same flowers, when exposed in an open box to the vapor of hydro-chloric acid, became after some hours a beautiful carmine red, which they preserved if dried in the dark and kept in a dry, dark pince. Prof. Gobba was led to these experi-ments by observing that violet flowers assume a tint of green when exposed to the smoke of a cigar, a result owing to the presence of ammonia in the smoke. The nature of these experiments is so simple that they may easily be repeated, and any amateur may produce the pleasuse of periuming them

## A New Metal.

Lucy Hooper writes to the Philadel-phia Telegraph from Paris: The Mari-time and Fluvial Exhibition, at the days, and the prizes to be awarded are already under consideration. The exhi-bition has assumed a peculiarly interesting form to an American from that many of the principal articles therein are destined for our Centennial therein are destined for our Centennial Exhibition. Among the new discoveries which owe their first publicity to this eminently successful enterprise, that of a new metal, which appears destined to figure largely in commerce, may be cited. This brilliant stranger, which has received the name of Argyrine, is white and lustrous, like silver, it is malleable, ductile, and inoxydable, and can replace silver advantageously in many of the important uses to which that metal is put, as it possesses the advantage of put, as it possesses the advantage costing just one-twelfth of the price silver. A very beautiful clock and cau-delebra in the Henri Deux style in Argy-rine have been exhibited and were much admired. A casting, rough from the mold, was shown to demonstrate how easily the Argyrine could be metted and how thoroughly it filled up the inter-stices of the mold. Some statuettes, seals and other toys for the etagore or he center table were exhibited, display ing the fine color of the metal and the contrast between the chased and pol-ished surfaces, the effect of which was ished surfaces, the effect of which quite equal if not superior to that of the same workmanship in silver. It is thought that it will soon be very gener-ally used for carriages, harness, etc., its non-corrosive qualities rendering it especially valuable for such uses.

Decrease of Water. The Vienna Academy of Science has addressed to the scientific societies of Europe a circular, accompanied with an instructive report, inviting them to unite in observations having for their object a determination of the causes of the decrease of water in surjung tives and crease of water in springs, rivers, and water-courses. Attention is called to the fact that, for a certain number of years, the waters of the Danube and other large rivers have been diminishing. The Austrian Engineers' and Architects' The Austrian Engineers' and Architects' Union have taken up the same question, and have appointed a Hydrostatic Commission to collect facts and prepare a report. Two members will observe the Danube, the Elbe, and the Rhine, and two others will study the meteorology of the subject and the influence that the Aipine glaciers and torrents may bear upon it. The Commission regard the devastation of the lorests as the prime cause of the disastrous decrease of European waters, and urge an immediate pean waters, and urge an immediate adoption of measures to remedy the evil.

## An Intelligent Dog.

An intelligent log.

Mr. Thomas E. Hent, of Sudbury,
Mass, is the owner of a dog of the Newfoundiand and St. Bernard breeds, which
seems to be possessed of more than ordinary instinct, taking into consideration the fact that he has had no special
training. Among other examples of his
intelligence the most noticeable seams
to be found in his willingness to act as

news carrier, which duty he has per-formed faithfully for about two years for his master. The restrience of Mr. Bent-is several rods from the main highway from Wayland to Suibury, and over which Moses Weston's Wayland and Suither states over the passes avery week. Suitbury staye-coach passes every week-day evening shortly after six o'clock. By this conveyance Mr. B. receives a Boston paper, and his faithful canine messenger meets the coach each night, picks up the paper and carries it to the Bouse of his own will, always waiting until he hears the conveyance ing, before leaving home. great while the coach does not arrive at the usual hour, and, in the event of an-other heavy wagen being on the road, the ratting of which resembles that of the stage, the dog goes to meet it and consequently gets "fooled." The dog is about five years of age, and is a great

A truly temperate man living in Pe oria street, bought a spirit-lamp the other day, there being sickness in the other day, there being sickness in the house, and next morning took it back to house, and next morning took it back to the store where he had purchased it, complaining that the biamed old thing wouldn't work. The vender said that was impossible, and asked him what sorted alcohol he put in the cup. The disciple of John B. Googh gave a groan. "Alcohol?" he said, selemnly; "my hell-destined worm. I never allow one drop of the demon alcohol in my house! No. of the demon alcohol in my house! No. sir; I used pure, cold water, heaven's last, best gift to man, in my lamp, and it wouldn't burn! Your lamp, sir, is a swindle; an unmitigated swindle."

The New York Tribune says: A patroiman said to a reporter last evening that \$10,000 reward would not tempt him that \$10,000 reward would not tempt him to lay hands on Tweed if he should meet him, and he thought many others of the force feit the same say. Said he: "If I should arrest Tweed, it would be the end of me in this city. His friends would be after me, and they have got the money to do anything. It is a queer state of affairs. If I didn't arrest him at sight I should be a feel and if did arrest him I should be a fool, and if I did arrest him I should be a bigger lool; and between the two I should let him go."

[That is the kind of fat cattle they raise in New York.]

An honest farmer has been repeatedly remonstrated with by his friends for his rashuess in driving across railroad tracks at the several crossings. He looks out for the engine when the bell rings, and just gets across the rails about one men and a haif in front of the cow-catcher. But the honest farmer re-plied with an open smile: "I ain't no plied with an open smile: "I ain't no such dam fool's you take me for. I've been trying to sell this yer horse for the last sixteen years, and I can't get more'n \$37 for him; but some of these days I'll get him killed by the cars, and then it there is any law in the land he'll bring me \$1,200 as easy as railing off a log."

"O wearisome condition of humanity!" How many wretched homes in our land low many heart-broken invalids! Life with many signifies a mere onerous existence. All are subject to disease, but when health is removed the hope is nearly gone out. Sickness is usually incorred through exposure or carelessness. Especially is this true with those diseases peculiar to woman. Through her own imprudence and folly she is made to drag out a miscrable existence—a source of snowance. imprudence and folly she is made to drag out a miscrable existence—a source of annoyance and anxiety to her friends, and any thing but a comfort and pleasure to herself. Exposure to the cold at times when she should be most prudent, and overtaxing her body with laborious employment, are both fundful causes of many of the mala lies from which she suffers. Gradually the bloom leaves her cheeks, her lips grow ashy white, her viracity departs, she continually experiences a feeling of weariness and general maguor, and altogether presents a ghost y appearance. What ing of weariness and general innguor, and altogether presents a ghost, appearance. What does she need? Should she take some atimulating drug, which will for the time make her "feel better," or does her entire system demand reparation? She requires something which not only will restore to health the discussed organs, but will tone and invigorate the system. Dr. Pierce's Favorite Prescription will do this. It imparts strength to the discussed parts, brings back the glow of health, and restores comfort where previously there was only suffering.

and restores comfort where previously there was only suffering.

Every invalid lady should send for "The People's Common Sense Medical Adviser," in which over fifty pages are devoted to the consideration of those diseases peculiar to Women. It will be sent, post-paid, to any address for at 50. Address to V. Piorce, M. D., World's Dispensary, Buffalo, N. Y. Agents wanted to sell this valuable work.

### THE WEEKLY SUN. 1776. NEW YORK, 1876.

Eighteen hundred and seventy-six is the Centennial year. It is also the year in which an Opposition House of Representatives, the first since the war, will be in power at Washington; and the year of the twenty-third election of a President of the United States. All of these events are sure to be of great interest and importance, especially the two latter; and all of them and everything connected with them will be fully and freshly reported and expounded in THE SUN.

The Opposition House of Representatives

and importance, especially the two latter; and all of them and everything connected with them will be fully and freshly reported and expounded in THE SUN.

The Opposition House of Representatives, taking up the line of inquiry opened years ago by THE SUN, will sternly and diligently investigate the corruptions and milecets of Grant's administration; and will, it is to be hoped, lay the foundation for a new and better period in our national history. Of all this THE SUN will contain complete and accurate accounts, furnishing its readers with early and trustworthy information upon these absorbing topics.

The twenty-laird Presidential election, with the preparations for it, will be memorable as deciding upon Grant's aspirations for a third term of power and plunder, and still more as deciding who shall be the candidate of the party of Reform, and as electing that candidate. Concerning all these audiects, those who read THE SUN will have the constant means of being thoroughly well informed.

The WEEKLY SUN, which has attained a circulation of over eighty thousand copies, already has its readers in every State and Territory, and we trust that the year IFG will see their numbers doubled. It will continue to be a thorough newspaper. All the general news of the day will be found in it, condensed when unimportant, at full length when of moment; and always, we trust, treated in a clear, interesting and instructive manner.

It is our aim to make the WEEKLY SUN the best family newspaper in the world, and we shall continue to give in its columns a large amount of miscellaneous reading, such as sories, tales, poems, scientific intelligence and information, for which we are not able to make room in our daily edition. The agricultural department especially is one of its prominent features. The fastions are also regularly reported in its columns; and so are the markets of every kind.

The WEEKLY SUN, elght pages, with fifty-six broad columns, is only \$1 20 a year, postage proprid. As this price barey repays the cost of the pape
